TROPICAL CYCLONE BULLETIN NO. 22F Typhoon INDAY (MUIFA)

Issued at 5:00 AM, 13 September 2022

TYPHOON "INDAY" REMAINS SLOW-MOVING OVER THE EAST CHINA SEA AND IS NOW OUTSIDE THE PHILIPPINE AREA OF RESPONSIBILITY (PAR).

Location of Center (4:00 AM)

The center of the eye of Typhoon INDAY was estimated based on all available data at 560 km North Northeast of Itbayat, Batanes (Outside the PAR) (23.9°N, 124.2°E)

Intensity

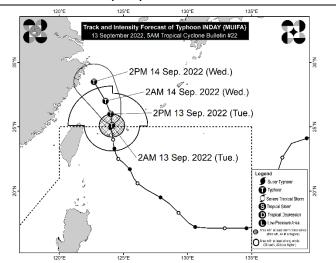

Maximum sustained winds of 140 km/h near the center, gustiness of up to 170 km/h, and central pressure of 965 hPa

Present Movement

North northeastward slowly

Extent of Tropical Cyclone Winds

Strong to typhoon-force winds extend outwards up to 380 km from the center

TRACK AND INTENSITY FORECAST

Date and Time	Center Position			Intensity		Movement
	Lat. (°N)	Lon. (°E)	Location	MSW (km/h)	Cat.	dir. and speed (km/h)
12-Hour Forecast 2:00 PM 13 September 2022	26.0	124.0	620 km North Northeast of Itbayat, Batanes (Outside the PAR)	130	TY	N 10
24-Hour Forecast 2:00 AM 14 September 2022	27.0	123.6	715 km North Northeast of Itbayat, Batanes (Outside the PAR)	130	TY	NNW 10
36-Hour Forecast 2:00 PM 14 September 2022	28.5	122.7	865 km North of Extreme Northern Luzon (Outside the PAR)	130	TY	NNW 15

TROPICAL CYCLONE WIND SIGNALS (TCWS) IN EFFECT

No Tropical Cyclone Wind Signal is currently in effect.

MMSS-07 Rev.2 / 03-01-22

TROPICAL CYCLONE BULLETIN NO. 22F Typhoon INDAY (MUIFA)

Issued at 5:00 AM, 13 September 2022

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall

Typhoon INDAY is unlikely to directly bring heavy rains in the country throughout the forecast period.

Severe Winds

Gusty conditions reaching strong to gale-force strength will continue to be experienced over Extreme Northern Luzon today and tomorrow due to the channeling of the typhoon circulation in the Luzon Strait.

HAZARDS AFFECTING COASTAL WATERS

Under the influence of Typhoon INDAY, a **Gale Warning remains effect** for the seaboards of Batanes and Babuyan Islands. For more information, refer to Gale Warning #6 issued at 5:00 AM today.

TRACK AND INTENSITY OUTLOOK

- Typhoon INDAY left the PAR region at 12:40 AM today. This tropical cyclone is forecast to track slowly in the very near term before gradually accelerating north northwestward over the East China Sea towards a possible landfall in the vicinity of Shanghai or Zhejiang along the east coast of China.
- This typhoon is forecast to slowly weaken or possibly maintain its strength throughout the forecast period as it tracks over the East China Sea due to marginally favorable environment. Rapid weakening may take place once the typhoon makes landfall over the eastern portion of China.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.

Unless a re-entry in the PAR region occurs, this is the **final bulletin** for this tropical cyclone. Succeeding updates will be provided in the 24-Hour Public Weather Forecast at 4:00 PM today.
